
Custom

Last updated: Tue, 02 Aug 2022 18:52:40 GMT

Find information about using the Custom section of the Website Configuration Tool to add Custom CSS, Custom Pages and Custom Scripts.

If what you want to achieve is beyond what is provided by the basic configurations in the Website Configuration Tool, use [Advanced website customization](#), where certain levels of programming skills are required.

See [Advanced website customization](#) for explanations of the basic approaches of doing advanced customization in CONTENTdm using CSS and JavaScript. See [Customization cookbook](#) for examples.

The advanced customization will show you how to use the **Custom CSS**, **Custom Pages** and **Custom Scripts** in this part of the Website Configuration Tool.
